

Individual Game Information for Bonus, Loyalty and VIP program: [Post API]

<https://www.propersix.com/casino/api/GameInfo>

Here is the post api where variable spin(how many trigger that spin) token ,game_id,betsize,line

1. spin (Every time when user plays we need total count of spin he plays in his play time. This spin count should exclude Freespins. Only paid spin count is needed. Ex.: 20)

2. token (Every time when user plays we need total count of token he uses in his play time. We will calculate the wager amount from this token count everytime. You just need to send how many tokens are used by a user in his play time. Ex.: 20)

3. game (Here we will need a Game Id which we will provide through the general get API build already. We will add a variable and pass game Id's as string. You just need to get that ID and pass that through this API)

4. betsize (Every time when user plays we need total count of betsize he uses in his play time. There will be condition of bonus depending on betsize, that's why we need betsize counts of the player every play time. You just need to send how much betsize are used by a user in his play time. Ex.: 11)

5. line (Every time when user plays we need total count of line he uses in his play time. There will be condition of bonus depending on line, that's why we need line counts of the player every play time. You just need to send how much line are used by a user in his play time. Ex.: 11)
